

**Amendments to the Specification are as follows:**

Please amend the paragraph beginning on page 2, line 6 and ending on page 2, line 25 as follows:

As shown in Fig. 1, the first LCD panel 10 is a substantially rectangular transfective LCD panel and is disposed to face most of the upper surface 2a of the double-sided illumination plate 2. A liquid crystal layer (not shown) lies between a first substrate 11 and a second substrate 12 that are made of glasses or the like. The first LCD panel 10 is formed by bonding these substrates 11 and 12 and the liquid crystal layer with a sealant. The side of the second substrate 12 not facing the liquid crystal layer is a display surface 10a. A transflector and a display circuit (neither are shown in the drawings) are laminated on the surface of the first substrate 11 facing the liquid crystal layer. A display circuit (not shown) is formed on the surface of the second substrate 12 facing the liquid crystal layer.
